

# EVERY BREATH MATTERS.

Don't let RSV take your breath away.

60+

ABRYSVO is an RSV vaccine for adults 60 and older.

ABRYSVO<sup>®</sup>

Respiratory Syncytial Virus Vaccine

from

Actor portrayal

## INDICATION

ABRYSVO<sup>®</sup> is a vaccine indicated for the prevention of lower respiratory tract disease caused by respiratory syncytial virus (RSV) in adults 60 years of age and older.

## IMPORTANT SAFETY INFORMATION

- ABRYSVO should not be given to anyone with a history of severe allergic reaction (eg, anaphylaxis) to any of its components

Please see Important Safety Information continued on pages 2-6. Please click for full [Prescribing Information](#) for ABRYSVO.

# RSV is a highly contagious virus that can have severe symptoms.

Respiratory syncytial virus (RSV) is a virus that affects the lungs and airways, and spreads easily. With symptoms similar to the flu, it can range from mild to severe, potentially leading to difficulties in breathing.

Actor portrayal

RSV can start mild, like a cold, with symptoms like congestion, runny nose, sore throat, fever and cough. But it can quickly become serious, with symptoms like:

- **difficulty breathing**
- **wheezing**
- **wet cough**
- **pneumonia**

## **IMPORTANT SAFETY INFORMATION (continued)**

- Fainting can happen after getting injectable vaccines, including ABRYSVO. Precautions should be taken to avoid falling and injury due to fainting

Please see Important Safety Information on pages 1-6.  
Please click for full [Prescribing Information](#) for ABRYSVO.

# RSV can be very serious.

As you age, your immune system weakens, potentially leaving you vulnerable to serious infections, like RSV.

- Are you 75 or older?
- Are you 60 or older with a chronic condition like asthma, COPD, heart disease or severe diabetes?

RSV can make you very sick and there are no prescription RSV treatments available for adults.

In very serious cases, RSV can lead to hospitalization and death.

## IMPORTANT SAFETY INFORMATION (continued)

- Adults with weakened immune systems, including those receiving medicines that suppress the immune system, may have a reduced immune response to ABRYSSVO
- Vaccination with ABRYSSVO may not protect all people
- In adults 60 years of age and older, the most common side effects ( $\geq 10\%$ ) were fatigue, headache, pain at the injection site, and muscle pain

Please see Important Safety Information on pages 1-6.

617

BREATHS TO SHOW 'EM  
YOUR STUFF.

Actor portrayal

## ABRYSVO is proven to help protect against RSV.

The CDC recommends a single dose of ABRYSVO for adults 75+ and those 60 or older with certain chronic conditions like asthma, COPD, heart disease and severe diabetes.

ABRYSVO (Respiratory Syncytial Virus Vaccine) helps your immune system make antibodies against RSV, so your body is better prepared to help protect you from the virus.

ABRYSVO was studied in a large clinical trial of 34,000 adults 60 and older, where half received ABRYSVO and half received placebo. Pfizer's RSV vaccine ABRYSVO was proven effective against RSV.

The most common side effects of participants who received ABRYSVO were fatigue, headache, pain at the injection site, and muscle pain. 9 out of 10 adults who received ABRYSVO in the clinical trial reported no injection-site side effects.
