

#### LISE

ABRYSVO is a vaccine indicated for pregnant individuals at 32 through 36 weeks gestational age for the prevention of lower respiratory tract disease (LRTD) and severe LRTD caused by respiratory syncytial virus (RSV) in infants from birth through 6 months of age.

#### SELECTED IMPORTANT SAFETY INFORMATION

ABRYSVO should not be given to anyone with a history of severe allergic reaction (e.g., anaphylaxis) to any of its components.

Please see Important Safety Information continued on pages 2-5. Please click here for full Prescribing Information for ABRYSVO.

### IMPORTANT SAFETY INFORMATION

 ABRYSVO should not be given to anyone with a history of severe allergic reaction (e.g., anaphylaxis) to any of its components

Please see Important Safety Information continued on pages 3-5. Please click here for full Prescribing Information for ABRYSVO.

### **IMPORTANT SAFETY INFORMATION (CONTINUED)**

- To avoid the potential risk of preterm birth, ABRYSVO should be given during 32 through 36 weeks gestational age
- Fainting can happen after getting injectable vaccines, including ABRYSVO. Precautions should be taken to avoid falling and injury due to fainting
- Adults with weakened immune systems, including those receiving medicines that suppress the immune system, may have a reduced immune response to ABRYSVO

Please see Important Safety Information continued on pages 4-5. Please click here for full Prescribing Information for ABRYSVO.

## Protect your baby against RSV with Pfizer's ABRYSVO, the only maternal vaccine for RSV

Scan this QR code or visit abrysvo.com/ RSVvaccinetool. Using your due date and location, you can check your eligibility for ABRYSVO.

## Getting recommended vaccinations are an important part of prenatal care

Since 2005, pregnant women have been receiving the Tdap vaccine to help protect their babies from whooping cough.

Pfizer's ABRYSVO works similarly to the Tdap vaccine, helping your body create antibodies that are passed to your unborn baby. By getting vaccinated with ABRYSVO, you can help protect your child against RSV from their first breath through 6 months.

### IMPORTANT SAFETY INFORMATION (CONTINUED)

- Vaccination with ABRYSVO may not protect all people
- In pregnant individuals, the most common side effects (≥ 10%) were pain at the injection site, headache, muscle pain, and nausea
- In clinical trials where ABRYSVO was compared to placebo, infants born to pregnant individuals experienced low birth weight (5.1% ABRYSVO versus 4.4% placebo) and jaundice (7.2% ABRYSVO versus 6.7% placebo)

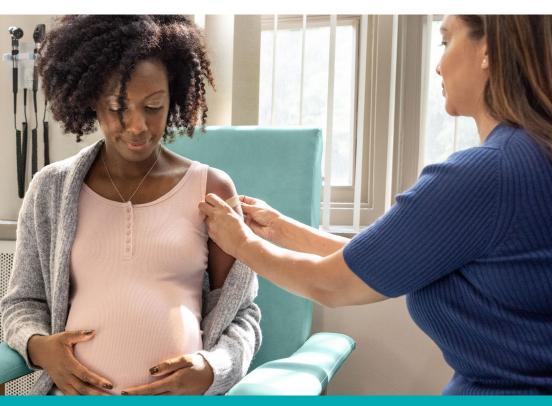

Please see Important Safety Information continued on page 5. Please click here for full Prescribing Information for ABRYSVO.

# Getting vaccinated helps protect your baby against RSV during their first RSV season

Talk to your OB to learn more about ABRYSVO.

Scan with your smartphone camera to see where you can get ABRYSVO near you.

### **IMPORTANT SAFETY INFORMATION (CONTINUED)**

Ask your healthcare provider about the risks and benefits of ABRYSVO. Only a healthcare provider can decide if ABRYSVO is right for you. Always talk to your healthcare provider about any side effects you may experience.

You are encouraged to report negative side effects of vaccines to the US Food and Drug Administration (FDA) and the Centers for Disease Control and Prevention (CDC). Visit http://www.vaers.hhs.gov or call 1-800-822-7967.

Individuals who received ABRYSVO during pregnancy are encouraged to enroll in a pregnancy exposure registry at 1-800-616-3791. The registry will monitor pregnancy outcomes.

Please click here for full Prescribing Information for ABRYSVO.

### Co-pay as low as \$0\*

Commercially insured patients may pay as little as \$0 out of pocket for ABRYSVO when administered in network. Ask your healthcare provider if ABRYSVO is covered under your insurance plan.

\*Coverage and cost may vary and are subject to change. This is not a guarantee of coverage. Coverage decisions are made by individual insurance plans.
