

If you have a current diagnosis of mild-to-moderate COVID-19 and are at high risk for severe COVID-19, are treatments available?

Am I at higher risk for progressing to severe COVID-19?

Certain medical conditions can put you at higher risk for progressing to severe COVID-19, including hospitalization or death. These medical conditions and lifestyle factors include diabetes, heart disease, lung disease, obesity, and smoking, among many others.

Among adults, heart disease, obesity, and chronic lung disease were among the most prevalent underlying conditions in those hospitalized for COVID-19 from March 2020 to August 2022.

What if I have a confirmed diagnosis of COVID-19?

If you have a confirmed diagnosis for severe COVID-19 and have high-risk factors, immediately speak to your healthcare provider to discuss if you are an appropriate candidate for available treatment options. Treatment options are available for people diagnosed with COVID-19, including for people with mild-to-moderate symptoms who are at high risk for progression to severe COVID-19 (including hospitalization or death).

How do I take these treatments?

Some therapies can be taken by mouth for 5 days, while others require intravenous administration.

Is it easy to receive these treatments if needed?

Yes, the national Test to Treat program gives you quick access to COVID-19 testing. If you test positive at a Test to Treat location and your healthcare provider determines that an oral prescription treatment is appropriate, then your prescription can be provided and filled right there. “One-stop Test to Treat” sites are available at hundreds of locations nationwide. To find sites in your area, visit the COVID-19 Test to Treat locator at <https://covid-19-test-to-treat-locator-dhhs.hub.arcgis.com/>.

What information will my doctor need from me?

If you have any COVID-19 symptoms or test positive, speak to your healthcare provider immediately to discuss appropriate treatment options. Be sure to inform your doctor about

- Any current prescription or over-the-counter medications or herbal supplements
- Any allergies
- Liver or kidney diseases
- Any serious illnesses
- Pregnancy or plans to become pregnant
- Breastfeeding a child

For more information about COVID-19 treatment options, visit the Centers for Disease Control and Prevention (CDC) COVID-19 website*
