

DID YOU KNOW

RSV is more than just a cold?

Don't wait to start the conversation. Talk with your doctor or pharmacist about the risks of RSV.

RSV is a **highly contagious respiratory virus** that can make you sick, make it difficult to breathe, and possibly send you to the hospital, especially if you are aged 60 or older. And since RSV is very contagious, meaning it can spread quickly and easily, you'll want to learn as much as you can as soon as possible.

To help make the conversation with your doctor or pharmacist a little easier, use the questions below to learn more about the risks of RSV.

Be sure to ask your doctor or pharmacist these questions:

- What can I do to help protect myself from RSV?
- What are the symptoms of RSV?
- Do I have underlying conditions that could put me at increased risk of severe RSV?
- If I am healthy, do I have to worry about RSV?
- Does my age increase my risk of severe illness from RSV?
- Am I eligible for RSV vaccination?

Start the RSV conversation with your doctor or pharmacist today

Notes: _____

RSV=respiratory syncytial virus.
