## 1. Introduction - Pfizer's Commitment to Transparency Reporting

We regularly work with healthcare professionals (HCPs) and healthcare organisations (HCOs) who advise us on a range of topics such as medicines development, the role of a medicine in a patient treatment pathway; health economics and clinical best practice. These working relationships are essential to gaining the real-world information we need in order to deliver treatment choices that improve the health of patients and to share information that may be relevant to clinical decision making.

We are committed to transparency about how we operate as a business and about the relationships we have with HCPs and HCOs. Sharing information about these relationships in a straightforward and open way will, we hope, help explain the critical value these relationships bring to patient management.

We believe that transparency is essential to building and maintaining confidence in us and in our medicines and strongly support the work being done by The European Federation of Pharmaceutical Industries and Associations (EFPIA) to improve transparency across the pharmaceutical industry.

This methodological note presents how the transfers of value are categorized and in what format they are disclosed.
