ATTENTION: PLEASE READ
Improper handling may cause problems

SHIPPING AND HANDLING GUIDELINES

SINGLE-USE Thermal Shipping Container

The Single-Use Thermal Shipping Container is NOT to be used for temporary storage of the vaccine

To ensure appropriate controls are in place, review the enclosed Dry Ice Safety Data Sheet BEFORE accessing the contents from the thermal shipping container and consult with your Occupational Health Department.

GENERAL INFORMATION
This guide details user processes and procedures that must be followed upon receiving the vaccine.

The nature of this vaccine requires it to be kept at extremely low temperatures during shipment. To achieve this, multiple dose vials of the frozen vaccine are shipped in insulated thermal shipping containers containing dry ice. This allows the vaccine to remain frozen at this low temperature.

FACTS ABOUT DRY ICE
Dry ice is the frozen form of carbon dioxide. When heated, most frozen solids melt to a liquid form, but dry ice transforms directly into a gas (sublimation). Dry ice sublimates at temperatures at or above -109°F (-78°C).

The main hazards of dry ice include asphyxiation and burns. Use of dry ice in confined spaces (small rooms or walk-in coolers) and/or poorly ventilated areas can result in depletion of oxygen, causing asphyxiation. Exposed skin should be protected from contact with dry ice. To ensure appropriate controls are in place, review the enclosed Dry Ice Safety Data Sheet BEFORE accessing the contents from the thermal shipping container and consult with your Occupational Health Department.

HANDLING
Use caution when lifting the thermal shipping container, as it may be heavy. Depending on the amount of vaccine ordered, the thermal shipping container will vary in weight. Do not place anything on top of the thermal shipping container. Contact Pfizer Customer Service at 1-877-VAX-CO19 (1-877-829-2619) immediately to communicate any issues.

Do not open the vial cartons or remove vials until you are ready for thawing or use. Visit www.cvdvaccine-us.com for further information.

You will need to take precautions when preparing to handle dry ice. Before opening the thermal shipping container, make sure the area in which you are working has proper ventilation. Use of dry ice in confined spaces, such as small rooms, walk-in coolers, and/or poorly ventilated areas, can result in depletion of oxygen, causing asphyxiation. Make sure you are wearing safety goggles or safety glasses with side shields and waterproof insulated gloves when handling dry ice.

To ensure all appropriate safeguards are in place, review the enclosed Dry Ice Safety Data Sheet, and consult with your Occupational Health Department.

In the event of vial breakage, damage, or leakage, to prevent cuts and exposure to the product, do not handle the vial with bare hands. Wear protective gloves and dispose of the vial pieces in a medical sharps container using forceps, tongs, or other appropriate tools.
Do not touch - avoid eye contact
Use waterproof insulated gloves when removing or adding dry ice to prevent cold burns and frostbite. Avoid contact with face and eyes. Wear safety goggles or safety glasses with side shields.

Do not eat
Dry ice is harmful if eaten or swallowed. If ingested, seek immediate medical care.

Do not store in confined spaces
Dry ice changes to a gas very rapidly at room temperature, displacing oxygen. Only use dry ice in open or well-ventilated areas.

Do not place in airtight containers
Airtight containers may explode as dry ice rapidly expands to a gas when exposed to temperatures above -109°F (-78°C).

GENERAL SAFETY GUIDANCE FOR DRY ICE ‘CAUTION’

VENTILATION
At room temperature (including most cold storage temperatures), dry ice becomes carbon dioxide gas, which may cause difficulty breathing or suffocation. If dry ice has been in a closed area, trailer, or container, open doors and allow adequate ventilation before entering. If you feel short of breath or develop a headache, these may be signs that you have inhaled too much carbon dioxide. Leave the area immediately. Carbon dioxide is heavier than air and accumulates in low, poorly ventilated spaces.

Operational practices for accessing a closed area where dry ice is present should be reviewed and agreed upon with your Occupational Health and Safety officer.

BURN TREATMENT
Dry ice may cause cold burns to the skin. Use waterproof insulated gloves when handling dry ice. Seek medical care as directed by the Dry Ice Safety Data Sheet.

DISPOSAL
Once dry ice is no longer needed, open the container and leave it at room temperature in a well-ventilated area. It will readily sublime from a solid to a gas. DO NOT leave dry ice in an unsecured area. DO NOT place in drain or flush in toilet. DO NOT dispose in trash. DO NOT place in a closed area such as an airtight container or walk-in cooler.
CONTENTS AND PACKAGING
There are multiple types of thermal shipping containers and vial carton sizes, all with similar components.

The example shown below is for illustrative purposes only and may not exactly replicate the thermal shipping container you receive. For actual photography of the various thermal shippers you may receive, please go to www.cvdvaccine-us.com.

Be sure to read all instructions that are included with the thermal shipping container and its components.

UNPACKING THE THERMAL SHIPPING CONTAINER

Step Instructions

1 First, break the seal to open the thermal shipping container.

When you open the thermal shipping container, you will see a removable foam lid that may contain an embedded temperature-monitoring device. Carefully remove the foam lid in order to access the contents of the thermal shipping container.

The temperature-monitoring device could either be embedded in the foam lid or located in the foam compartment found on the box flap with the Return Kit.

2 The temperature-monitoring device continuously tracks the temperature during shipment to document if the frozen vaccine product has been maintained at the required temperature during transport to vaccination centers. Upon receipt, press and hold the stop button for 5 seconds. Sites are responsible for continuing to monitor the product storage temperature.

Information about temperature monitoring can be found at www.cvdvaccine-us.com.

3 Make sure that you are now wearing waterproof insulated gloves and safety goggles or safety glasses with side shields as you prepare to handle layers of the container that have dry ice. Beneath the foam lid is the dry ice pod, which holds a layer of dry ice to help maintain the temperature of the multiple dose vials. There will also be dry ice in compartments in the container that surround the box that holds the vial carton compartment. Using your waterproof insulated gloves, remove the dry ice pod.
You may see a lid for the compartment that holds the vial carton. If your thermal shipping container comes with a lid for the vial carton compartment, open it to access the vial carton. The vial carton may not be visible at first glance because it may be wrapped in a colored bag. Carefully remove the vial carton. In some cases, the compartment holding the vial carton is affixed to the inside of the thermal shipping container and should not be removed when accessing or removing the vial carton.

Ensure Authenticity—Help Prevent Counterfeiting: Ensure the safety of the vaccine vials by limiting access to only authorized personnel. The location they are stored in must be secure and locked when not in use. To prevent counterfeits, discard vaccine vials in sharps containers and empty vial cartons as medical waste or deface or safely crush all materials so they cannot be reused. Remember, the vaccines are only available through government-authorized vaccination centers—such as doctors’ offices, authorized pharmacies, outpatient clinics, community vaccination locations, and hospitals. The vaccine can only be administered by licensed healthcare professionals, or other individuals that are approved vaccinators, at government-authorized vaccination sites. Individual doses are not for sale.

Important Note:

Do not open the vial cartons or remove vials until you are ready for thawing or use. Visit www.cvdvaccine-us.com for further information.

Review the Product Safety Data Sheets (available by visiting https://safetydatasheets.pfizer.com/).

You must immediately store the vaccine product, preferably in an ultra-low-temperature (ULT) freezer.

NOTE: The single-use thermal shipping container should not be used as temporary storage.

For additional information about storage time limits and transferring between storage environments, visit Storage and Handling at www.cvdvaccine-us.com. Do not use the single-use thermal shipping container as temporary storage.

Masks were worn due to pandemic.
The temperature-monitoring device must be returned to the supplier to help Pfizer fulfill its commitment to reusable resources. Remove the temperature-monitoring device and the temperature-monitoring return kit from the Single-Use Thermal Shipping Container.

For complete instructions on how to return the temperature-monitoring device using the included temperature-monitoring return kit, please refer to the Return Instructions downloadable resource available at www.cvdvaccine-us.com. Do not return the vaccine or vaccine vials.

For assistance on returns, you can contact:
US number: 1-701-540-4039
pfizer.logistics@controlant.com

After removal of the temperature-monitoring device and temperature-monitoring return kit, the Single-Use Thermal Shipping Container should be disposed of at your facility.

**DISCARDING DRY ICE**

The single-use thermal shipping container should not be used as temporary storage. You should discard the dry ice. Take necessary precautions by reviewing the Dry Ice Safety Data Sheet, and consult with your Occupational Health Department.

To discard, open the thermal shipping container and leave it at room temperature in a well-ventilated area. It will sublimate from a solid to a gas. DO NOT leave dry ice in an unsecured area. DO NOT place in drain or flush in toilet. DO NOT dispose in trash. DO NOT place in a closed area such as an airtight container or walk-in cooler.

Masks were worn due to pandemic; refer to SDS for dry ice protection.
